

communicated to the user over a communication network, the method comprising the steps of:

monitoring a user's progress in the user's review of audio program material, said monitoring performed during a first audio program review session;

when the user terminates the first audio program review session, storing an indication of the user's progress in reviewing the program material during that session;

in a second audio program review session subsequent to the termination of said first program review session, playing said audio program material to said user beginning from a position within said material [determined] based on said stored indication.

Sub C5
Claim 25: (Once amended)

An audio information service platform comprising:

an audio content database;

a personal profile database;

a program playback module coupled to said audio content database;

a playback position monitor coupled to said program playback module;

B2
and

a service controller [creating] utilizing a user identifier, and storing an audio content identifier and a playback position identifier with said user identifier in said personal profile database.
